1.0 Introduction

Thank you for choosing General Treatment Products “Chem-Mix” Chemical Mixers. This industrial, assembly comes complete and ready to install. In this document we explain the basics for locating, installing and operating this chemical mixer. For further information, please contact us at customerservice@gtpcompany.com or call us at the phone number on the cover.

2.0 Warranty

General Treatment Products “Chem-Mix” Chemical Mixers are guaranteed for two years from date of shipment against manufacturing defects in material and workmanship that develop in the service for which they are designed. We will repair or replace a defective part of this system when returned to our factory with freight prepaid; providing that the part is found to be defective upon inspection. We assume no liability for labor and/or other expenses in making repairs or adjustments.

3.0 Unpacking

Upon receipt of order, inspect package thoroughly. In the event damage occurred in transit you must notify the freight company within 3-5 days of receipt of order. Once mixer is inspected for damage and received in good condition, store indoors until installing.

*** WARNING – BEFORE YOU GET STARTED ***

1) All fasteners & fittings should be inspected and secured before operation as they may be loosened in transit
2) Personnel safety practices should apply at all times
3) Safety glasses or face shields and gloves should be worn
4) Do not service glycol feed package without disconnecting power
5) Close isolation valve and release pressure before servicing any components on the system
6) All liquids in system should be drained before servicing
### 3.1 ORDER VERIFICATION

In order to verify receipt of correct product, use the following table and model number to identify the contents.

#### OPTIONS
- **SSC**: Stainless Steel Coupling, in place of standard brass
- **STS**: Pump Suction Tube Shield
- **PSW**: Power Cord Switch, 2amp resistive
- **CPM**: Control Panel, Motor Starter and Overload
- **EK**: Green Epoxy Coating of Shaft and Axial Impeller
- **TFE**: Green Teflon Coating of Shaft and Axial Impeller
- **( )**: Shorter than Standard Shaft

**Note:** See pricing for complete options list

#### MIXING IMPELLER
- **N**: Neoprene Radial Impeller
- **E**: Economy Stamped Axial Impeller (Propeller)
- **P**: Cast Axial Impeller (Propeller)

#### HORSEPOWER
- **0066**: 1/15HP
- **0166**: 1/6HP
- **0250**: 1/4HP
- **0330**: 1/3HP
- **0500**: 1/2HP
- **0750**: 3/4HP
- **1000**: 1HP
- **1500**: 1 1/2HP
- **2000**: 2HP

#### MOUNT
- **B**: Bracket Mount, Adjustable
- **C**: Clamp Mount, Adjustable
- **T**: Thread Mount
- **F**: Flange Mount
- **X**: Tank Stand Mount/No Mount

**Note:** Not all options and sizes available on all mixers.

### 4.0 LOCATION AND ENVIRONMENT

All standard GTP “Chem-Mix” models are standard as totally enclosed motors, but should be protected from harsh environmental conditions. The addition of an awning or shed is recommended on outdoor applications will needed to validate warranty and will prolong the life of any equipment.

### 5.0 INSTALLATION

Once location is decided on, chemical mixer needs to be securely mounted to frame or sturdy structure. “Chem-Mix” mixers may not be mounted directly to the wall of polyethylene tanks unless adequate strength is provided. Polyethylene is a flexible material and eventually will give way to the vibrations and weight of the mixer. Be sure that anchoring bolts and wiring comply with local building codes. The following diagrams will help provide the mixing needed. Please contact the factory for assistance.
5.1 MIXER ORIENTATION How the mixer is oriented determines the type of mixing produced.

**Blending Installation (shown to right)**

Note: Mixer needs to be installed at 10-15 degrees from vertical and towards center of tank. This will force fluid movement from bottom to top of tank.

If vortexing (fluid funneling) appears, shift angle of mixer towards side wall.

**Vortexing Installation (shown to right)**

Note: Mixer needs to be installed vertically and in the center of the tank. This will create the best vortex and help draw in dry chemicals. Baffles can be added to the inside of the tank to decrease the vortexing.

If Dry chemicals are not being drawn in, mixer may be undersized. If dry chemicals are settling at the bottom of the tank, the mixer shaft may be too short.

5.2 MIXER SHAFT INSTALLATION When installing the mixer shaft, align the red arrow and the set screw dimple, and then hand tighten the shaft screw with Allen wrench. Be sure to check all fasteners, mounting and set screws, before start up, to ensure proper mixer performance. **DO NOT USE LOCK TIGHT ON SET SCREW, OR SHAFT WILL NOT BE ABLE TO BE REPLACED.**
6.0 PRESSURE AND TEMPERATURE LIMITATIONS: GTP Chemical Mixers maximum operating perimeters are 104°F. Some optional fittings, as noted in descriptions, may change limitations, contact factory for assistance.

Note: Minimum Fluid Temperature is 50°F/10°C.

7.0 ROUTINE MAINTENANCE Routine maintenance in this section is referred to as checking once a week until a maintenance schedule can be determined. All fasteners should be check for proper operations. Maintenance and care will depend upon the usage and environment in which the chemical mixer is subject to.

Inspection of should include:
- Balance – Be sure that the mixer is not shaking or wobbling
- Mounting Hardware – Be sure that the mounting hardware is secure.
- Shaft Integrity – Check the shaft for chemical attack.
- Fluid Consistency – Check that the fluid is being mixed to your requirements.

8.0 PARTS LISTING For replacement parts, contact us for assistance. Have model number and serial number ready for part verification.

9.0 TROUBLE SHOOTING If you are having problems, contact us at repairs@gtpcompany.com, or you can call us at the number on the front of the Instruction manual.
