Walchem Controller USB Data Logging Feature is Now Free!

All **Walchem W400 Controllers** that had "U" option as an adder are now a standard integration of the controller as of February 6, 2011.

This data logging feature allows you to easily upload and download pertinent information of your system using a USB flash stick. Save time by copying settings from an existing controller and upload to a new controller. Programming your new controller this way can be accomplished in seconds. Download stored data from the controller to validate water treatment results and easily develop reports that show actual water usage, system conductivity, temperature and more. This will allow you to quickly identify system upsets by knowing exactly what happened and when. An event log can be downloaded to tell you precisely when pumps turned on, valves opened and when there was flow or no-flow. If you are currently using a controller that doesn't include this feature or are still paying extra for it, now is the time to make the switch to **Walchem Controllers**.

Manufacturing: Glycol Feed Packages, Bypass Filter Feeders, Separators and Separator Systems, Bromine Feeders, Corrosion Coupon Racks, Chemical Mixers, Tanks and Tank Stands.
